SUMMARY

Fintech and Web3 professional spanning full-stack engineering and business development. Co-founded a US-based digital wealthtech startup and led end-to-end development of an AI and blockchain based wealth management platform (Node.js and Python backends, cross-platform frontends, EVM-compatible smart contracts, AWS/GCP cloud infrastructure with Docker and CI/CD); currently drives partnerships, regulatory research, and investor materials at a blockchain infrastructure startup. Combines hands-on technical depth with extensive experience in US and global business environments.

EDUCATION

Bachelor of Arts in Computer Science

University of Minnesota-Twin Cities

GPA: 3.68 / 4.00

Minneapolis, MN

Graduated: May 2024

WORK EXPERIENCE

BetweenBits

Business Development Lead

Seoul, South Korea

February 2026 - Present

Blockchain infrastructure startup building Bitcoin-anchored proof-of-reserves attestation and cross-border stablecoin settlement across EVM, Bitcoin, and Lightning rails.

- Responsible for the company's overseas business and business development; oversee planning and development of its cross-border remittance and settlement business and its digital asset proof-of-reserves (attestation) business.
- Led the establishment of the company's Singapore and Vietnam entities, owning legal communication with local law firms and contributing to international financial license applications.
- Negotiate partnerships with global financial infrastructure companies, including a proposed cross-border settlement pilot with a global financial group and go-to-market collaboration with a Big 4 accounting firm.
- Drive outbound business development toward licensed stablecoin issuers and digital asset exchanges ahead of new stablecoin regulations taking effect in 2026, designing account-based, multi-channel outreach programs end to end, from decision-maker mapping and personalized sequences through follow-up cadences and leave-behind collateral.
- Conduct primary regulatory and market research across ASEAN jurisdictions (exchange licensing regimes, reserve attestation requirements, fiat off-ramp partner landscapes), shaping go-to-market timing and jurisdiction-based product packaging; built a 5-year, four-engine revenue model used in investor and partner discussions.

Binfin8

Co-founder & Lead Full-Stack Engineer

San Francisco, CA

June 2024 - November 2025

Digital wealthtech SaaS: AI and blockchain based asset management and inheritance platform.

- Joined as an early team member and grew into lead engineer and co-founder, contributing across product development, business strategy, partnerships, fundraising, and building the internal HR system.
- Led end-to-end development of the MVP: a multi-asset portfolio dashboard unifying stocks, crypto, fiat, and real estate with real-time pricing, allocation visualization, and unrealized P&L tracking.
- Built a legal document management system for wills, trusts, and prenuptial agreements with automated PDF generation, and implemented Ethereum (EVM) smart-contract anchoring for tamper-proof document integrity verification (QR verification, on-chain record lookup).
- Developed an AI legal assistant with chat and voice interfaces using Deepgram STT, Azure Speech TTS, and swappable Claude / GPT / Gemini / Groq backends, plus an OCR and AI document-analysis pipeline that auto-fills estate document fields from uploaded documents.
- Integrated exchange and brokerage APIs (Alpaca) for live quotes, order execution, and portfolio synchronization via Firebase Firestore; designed recurring-investment scheduling and future-value simulation linked to estate planning documents.
- Established CI/CD pipelines with monitoring and alerting on AWS/GCP for operational stability; planned, built, and maintained the company's official website (responsive, contact forms, ongoing operations).

Republic of Korea Marine Corps

South Korea

Sergeant, Infantry

June 2021 - December 2022

- Completed an 18-month mission defending the Northwest border area of South Korea.
- Developed discipline and accountability by resolutely completing tasks in high-pressure situations, while performing computational guard duties and facilitating technical communication for team coordination.

Interpreter, G2 Intelligence

April 2022 - May 2022

- Selected to interpret for tactical decision-makers in the ROK-US combined intelligence section (G2) during the Combined Command Post Training, a theater-level joint exercise simulating actual wartime operations.
- Provided real-time interpretation of intelligence briefings and operational discussions between senior ROK and US officers, where precision under time pressure directly supported combined tactical decision-making and cross-command coordination.

PROJECT EXPERIENCE

AI-Generated Video Artwork Channel (Personal Project)

January 2023 - January 2024

- Directed AI generative content projects spanning AI images, animations, and real-to-AI transition sequences; built a repeatable production pipeline across image generation models, animation tools, and video editing.
- Curated and promoted content across social media platforms for a full year, analyzing engagement metrics to iterate on content strategy and gaining hands-on insight into content advertising and audience dynamics.

Automated Cryptocurrency Trading Bot (Personal Project)

May 2020 - September 2020

- Designed and implemented a Python program that autonomously executes trades when predefined conditions are met, implementing the Volatility Breakthrough strategy with dynamic market-trend assessment to capitalize on bull markets.
- Integrated real-time APIs from multiple cryptocurrency exchanges for price feeds and order execution; operated the bot live with consistently profitable outcomes while tuning entry conditions and risk limits.

ATM User Interface (Academic Project)

September 2018 - December 2018

- Developed a user-friendly ATM interface in Java with intuitive design and streamlined transaction flows covering cash withdrawal, deposit, and fund transfers.
- Enhanced security and user satisfaction through PIN authentication, transaction encryption, and user testing, applying practical UI/UX and secure software development principles.

SKILLS

Programming Languages: Java, Python, C, C++, JavaScript, TypeScript, Dart, OCaml, SQL, HTML/CSS, Assembly

Frontend: React.js (including dApp interfaces), Flutter, responsive UI/UX

Backend: Node.js (TypeScript), Python, Java, RESTful API design, Firebase, database design

Blockchain / Web3: EVM-compatible infrastructure, Ethereum smart contracts, on-chain proof-of-reserves, stablecoin settlement rails (EVM, Bitcoin, Lightning), exchange API integration

AI / ML: Generative AI integration (Claude, GPT, Gemini, Groq), TensorFlow, Transformers, OCR pipelines, STT/TTS voice agents

Cloud & DevOps: AWS, GCP, Azure, Docker, Firebase, CI/CD pipelines, monitoring and alerting

Business: Market and regulatory research, outbound BD and account-based outreach, investor materials, financial modeling, partnership development

Languages: Korean (native), English (native-level)
